TECHNICAL SKILLS

Languages: JavaScript, HTML/CSS, TypeScript, Python, C++, C, SQL/MySQL, Java

Frameworks: React, Next.js, Node.js, Express.js, Deno.js, Tailwind CSS

DevOps/Tools: Git, Github, CI/CD, VS Code, Supabase, Vercel, DigitalOcean, Postman, MongoDB, Cloudinary

Libraries: pandas, NumPy, Tkinter, PyTorch

Core CS Knowledge: Data Structures and Algorithms, Object-Oriented Programming, Database Optimization

EXPERIENCE

Software Engineering Intern

Remote, Canada

Bharat Denim

May 2025 – Aug 2025

- Engineered backend features for an inventory management system serving 10,000+ customers, optimizing SQL queries and debugging data-flow issues to ensure system reliability.
- Managed and refactored MySQL and PostgreSQL database schemas for inventory, orders, and product data by normalizing tables, adding indexes, and tightening constraints, contributing to a 15% reduction in daily processing time and improved scalability.
- Worked in a backend team of 5 by driving Git workflows (branching strategy, PR reviews, merge conflict resolution), improving code quality and reducing integration issues across the codebase.

School Prefect and Head of Physics Department

New Delhi, India

Springdales School

2024 – 2025

- Led the Physics Department as Head, managing and organizing over 10 academic and extracurricular events annually for a community of approximately 1000 students.

PROJECTS

UW Login Helper | JavaScript, HTML, CSS

- Spearheaded development of a Chrome extension using JavaScript, HTML, and CSS to automate University of Waterloo portal login, enabling 1-click autofill for streamlined student access.
- Leveraged browser APIs to securely store and pre-fill credential data, improving user experience and reducing repetitive login steps for 100+ students.
- Implemented intuitive UI and robust error handling, resulting in increased productivity and positive feedback from the student community.

AI-Powered Netflix Recommendation Engine | React, TypeScript, Tailwind CSS, Supabase, Lovable AI

- Developed an intelligent questionnaire application using React and TypeScript that leverages AI-driven conversational flow to generate personalized Netflix recommendations based on user mood and preferences.
- Architected a context-aware AI system with a feedback-based rating system to refine results and prevent duplicate suggestions, reducing user content search and scroll time by approximately 50%.
- Deployed globally for user testing, achieving 90% accuracy in personalized recommendations with scalable Supabase backend and responsive UI.

AI Interview (McGillHacks 13) | React, TypeScript, Tailwind CSS, Gemini API, ElevenLabs, Supabase

- Architected a high-fidelity React and TypeScript frontend featuring a dynamic interview interface and real-time dashboard tracking 10+ performance metrics, reducing average page load time by 0.8 seconds and increasing completion rates.
- Integrated Gemini 2.5 Flash and ElevenLabs APIs to deliver automated technical assessments, achieving a 98% successful response rate for voice-to-text processing during the 24-hour development sprint.
- Leveraged Supabase for secure, low-latency data persistence of interview transcripts and analytics, optimizing state management to reduce frontend data fetch times by approximately 40%.

EDUCATION

University of Waterloo

Waterloo, ON

Bachelor of Applied Science in Computer Engineering

Present

- Coursework: C++ Programming, Microcontrollers, Calculus, Linear Algebra, Classical Mechanics
- Scholarships: President's Scholarship of Distinction, David Johnston International Student Entrance Scholarship, International Student Entrance Scholarship
